REPORT.

TO THE RIGHT HONOURABLE

LORD PENTLAND,

His Majesty's Secretary for Scotland.

GENERAL REGISTRY OFFICE OF BIRTHS, &c., EDINBURGH, 29th March, 1909.

My LORD,

I have now the honour to submit to you, in accordance with the requirements of the Scottish Registration Act (17 & 18 Vict. cap. 80), a General Abstract of the Births, Deaths, and Marriages registered in Scotland during the year 1908, drawn up in the usual form, with a view to its being laid before Parliament.

I have also the honour to submit to you, in accordance with Section 19 of the Vaccination Act (26 & 27 Vict. cap. 108), the Forty-fourth Annual Report on Vaccination, which includes all the usual details relative to children whose Births were registered in Scotland during the year 1907.

I have the honour to be,

MY LORD,

Your most obedient Servant,

STAIR AGNEW, Registrar-General.

STAIR AGNEW

REPORT TO THE REGISTRAR-GENERAL

By James Craufurd Dunlop, M.D., F.R.C.P. Edin.

SIR.

I have the honour to submit the Fifty-fourth Annual Report regarding the Births, Deaths, and Marriages registered in Scotland. In it there are given facts concerning the births, deaths, and marriages registered in Scotland during the year ending 31st December 1908. Fuller information regarding those births, deaths, and marriages will be given in the Fifty-fourth Detailed Annual Report, which will be submitted at a later date.

I also submit the Forty-fourth Annual Report on Vaccination; in it is contained information regarding the administration of the Vaccination (Scotland) Acts, 1863 to 1907, more particularly regarding the vaccination of children whose births were registered in

Scotland during the year ending 31st December 1907.

The more outstanding facts of the vital statistics of Scotland for the year are a low birth-rate, a low death-rate, and a low marriage-rate. The combined statistics of eight of the principal towns show that in them the birth-, death-, and marriage-rates were also low, the birth-rate being lower than that of the previous year, which was the lowest previously recorded for those towns, the death-rate being for the first time less than 17 per thousand, and the marriage-rate being the same as those of 1886 and 1887, which were the lowest previously recorded. The death-rates of the year in the towns of Edinburgh, Aberdeen, Paisley, and Greenock are found to be the lowest recorded.

The Forty-fourth Annual Report on Vaccination is of special interest, in that it shows the effect of the recent Vaccination Act, the Act which permits the conscientious objection of the parents to be a valid excuse for the non-vaccination of children. The result of that Act is found to be that a decidedly larger number of children escape

vaccination than was previously the case.

I.—BIRTHS, DEATHS, AND MARRIAGES IN SCOTLAND. POPULATION.

The population of Scotland at the middle of 1908 is estimated to have been 4,826,587, the male population being estimated at 2,358,258, and the female population at 2,468,329. The total population is estimated to have been 50,524 more at the middle of 1908 than at the middle of 1907, the male population being estimated to have been 26,351 more, and the female population 24,173 more. These estimated increases of population are based on the rates of increase observed in the last intercensal period, which rates are assumed to have continued since the last census. The natural increase of the population of Scotland, the excess of births over deaths, from the middle of 1907 to the middle of 1908 amounts to 52,875. The difference between that figure and the estimated increase may be taken as some indication

viii Report.

of the probable effect of immigration and emigration. The natural increase of the male population between the middle of 1907 and the middle of 1908 was 28,129, and of the female population 24,746.

Of the estimated population of Scotland, 2,215,857, or 45.91 per cent., are included in the estimated population of the Principal Town Districts, which include those towns which at the time of the last

Table I.—Population estimated to the middle of each year, with the Number of Births, Deaths, and Marriages registered in Scotland during each of the Years 1855 to 1908, and their Proportion to the Population; also the Excess of Births over Deaths, the Number of Illegitimate Births, and their Proportion to the Total Births.

census had a population of over 30,000; 609,099, or 12.62 per cent., are included in the estimated population of the Large Town Districts. which are registration districts containing towns which at the time of the last census had populations of between 10,000 and 30,000; 973,419. or 20.17 per cent., are included in the estimated population of the Small Town Districts, which are those registration districts containing towns which at the time of the last census had populations of between 2000 and 10,000; 916,183, or 18.98 per cent., are included in the Mainland-Rural Districts, which consist of those portions of the mainland of Scotland which are not included in the above urban districts; and 112,029, or 2.32 per cent., are included in the estimated population of the Insular-Rural Districts, which are those portions of the islands of Scotland which are not included in the urban districts. The estimated population of the Principal Town Districts is 37,821 more than in the previous year, that of the Large Town Districts 6300 more, and that of the Small Town Districts 9883 more, but that of the Mainland-Rural Districts is 2851 less, and that of the Insular-Rural Districts 629 less.

BIRTHS.

The total number of births registered in Scotland during the year 1908 was 131,337, which is 2548 more than the number of births registered during 1907, but is 329 less than the average number of births registered annually during the previous five years, and 242 less than the average number of births registered annually

during the previous ten years.

Of these births, 59,741, or 45.5 per cent., were registered in the Principal Town Districts; 18,649, or 14.2 per cent., in the Large Town Districts; 28,396, or 21.6 per cent., in the Small Town Districts; 22,377, or 17.0 per cent., in the Mainland-Rural Districts; and 2174, or 1.7 per cent., in the Insular-Rural Districts. Compared with the number of births registered in these groups of districts in 1907, the births of the year in the Principal Town Districts show an increase of 439, those of the Large Town Districts an increase of 294, those of the Small Town Districts an increase of 1466, and those of the Mainland-Rural Districts an increase of 381, but those of the Insular-Rural Districts show a decrease of 32.

The birth-rate of the year is 27.21 per thousand, a rate which is 0.24 above that of the previous year, but is 0.95 below the mean of the rates of the previous five years, and 1.69 below the mean of the birth-rates of the previous ten years. In the Fifty-third Annual Report attention was drawn to the fact that the birth-rate of the year 1907 was the lowest recorded. The birth-rate of this year is slightly more than that of 1907, but is lower than that of any other previous year. From 1855 to 1893 the birth-rate ranged between 30 and 35.6 per thousand, between 1894 and 1903 it ranged between 29 and 30, in 1904 and 1905 it was between 28 and 29, in 1906 it for the first time fell below 28, in 1907 it fell below 27, but the small increase found this year brings it again above 27 per thousand.

The birth-rate of the year in the Large Town Districts is 30.6, in the Small Town Districts 29.2, in the Principal Town Districts

TABLE II.—Number of Births, Deaths, and Marriages in Scotland and their Proportion to the Population, estimated to the middle of each year, during each Quarter of the Years 1898 to 1908 inclusive.

27·0, in the Mainland-Rural Districts 24·4, and in the Insular-Rural Districts 19·4. Compared with the birth-rates of the previous year that of the Small Town Districts shows an increase of 1·3, that of the Mainland-Rural Districts an increase of 0·5, and that of the Large Town Districts an increase of 0·2, but those of the Principal Town and Insular-Rural Districts each show a decrease of 0·2.

Of the 131,337 births, 2131 were registered in the Northern Division of the Counties, 3344 in the North-Western Division, 12,348 in the North-Eastern Division, 17,953 in the East-Midland Division, 10,547 in the West-Midland Division, 62,822 in the South-Western, 17,976 in the South-Eastern, and 4216 in the Southern. The birth-rate in these divisions of the counties ranged from 29.9 in the South-Western, to 19.7 in the Northern. In the West-Midland it was 27.4, in the East-Midland 25.9, in the North-Eastern 25.7, in the South-Eastern 25.3, in the Southern, 22.6, and in the North-Western 20.8. Compared with the birth-rates of the divisions of the counties in 1907, that of the Southern shows an increase of 0.9, those of the East-Midland and South-Eastern both show an increase of 0.8, that of the North-Western shows an increase of 0.2, and that of the South-Western an increase of 0.1, but that of the North-Eastern shows no change, and those of the West-Midland and of the Northern show a decrease of 0.8.

Illegitimate births registered during the year numbered 8613, and amounted to 6:56 per cent. of the total. These births are 271

xii Report.

more than those registered in 1907, but are 194 fewer than the average number registered annually during the previous five years, and 45 fewer than the average number registered annually during the previous ten years. The illegitimate rate is 0.08 more than that of the previous year, but 0.13 less than the mean of the corresponding rates of the five previous years, and 0.02 less than the mean of the illegitimate rates of the ten previous years. The percentage of the total births which were illegitimate ranged from 8.6 in the Mainland-Rural Districts to 4.6 in the Insular-Rural Districts. In the Principal Town Districts it was 6.6, in the Small Town Districts 6.1, and in the Large Town Districts 5.0. In the Large Town and Insular-Rural Districts this rate is lower than in the previous year, but in the Principal and Small Town, and in the Mainland-Rural Districts it is higher. In the divisions of the counties the illegitimate rate ranged from 11.9 in the North-Eastern, and 11.6 in the Southern, to 4.4 in the West-Midland. In the Northern it was 7.4, in the South-Eastern 6.8, in the East-Midland 6.4, in the North-Western 6.1, and in the South-Western 5.5. In the Northern, South-Western, South-Eastern, and Southern this rate is higher in this than in the previous

Report. xiii

year, but in the North-Western, North-Eastern, East-Midland, and West-Midland it is lower in this than in the previous year.

In the counties the illegitimate rate ranged from 15·3 per cent. in Wigtown, 12·6 in Nairn, 12·4 in Banff, 12·3 in Elgin, 12·0 in Aberdeen, and 11·1 in Caithness, to 3·8 in Shetland, 3·8 in Dumbarton, 4·1 in Stirling, 4·1 in Linlithgow, 4·3 in Fife, and 4·4 in Renfrew. In 9 counties the illegitimate rate was more than 10 per cent., in 18 counties it was between 5 and 10 per cent., in 6 counties it was less than 5 per cent. The largest increases of the county illegitimate rates as compared with those of the previous year are in Roxburgh, 3·2, Wigtown, 2·6, and Sutherland 2·5; the largest decreases are in Kinross 2·5, Elgin 2·1, Kirkcudbright 2·1,

Of the total births registered during the year, 66,856 were of males, and 64,481 of females. The proportion of males to every 100 females at birth was 103.7. The birth-rate of male children per thousand of the male population was 28.3, and that of female children per thousand of the female population was 26.1; the former rate is the same as in the previous year, but the latter rate is 0.4 more than in that year.

The birth-rate of the first quarter of the year was 27.0, that of the second quarter was 29.6, that of the third quarter was 26.8, and

that of the fourth quarter was 25.2.

The average daily number of births registered throughout the year was 359. This average in June was 401; in April, 395; in May, 378; in July, 373; in March, 361; in January, 359; in February, 351; in October, 349; in September, 347; in August. 344; in December, 332; and in November, 317.

DEATHS.

The total number of deaths registered in Scotland during 1908 was 77,839, a number which is 572 more than that of the deaths registered in the previous year, 1555 more than the average number registered annually during the preceding five years, but 136 less than the average number registered annually during the preceding ten years. Of the deaths, 35,984, or 46°2 per cent., were registered in the Principal Town Districts; 10,335, or 13°3 per cent. in the Large Town Districts; 15,466, or 19°9 per cent., in the Small Town Districts; 14,333, or 18°4 per cent., in the Mainland Rural Districts; and 1721, or 2°2 per cent., in the Insular-Rural Districts. Compared with the deaths registered in 1907, those registered in the Principal Town Districts show a decrease of 618, and those in the Insular-Rural Districts a diminution of 92; but those registered in the Small Town Districts show an increase of 774, those in the Large Town Districts an increase of 298, and those in the Mainland-Rural Districts an increase of 210.

The death-rate of the year is 16·13, a rate which is 0·05 less than that of 1907, 0·18 less than the mean of the death-rates of the preceding five years, and 1·01 less than the mean of the death-rates of the preceding ten years. The death-rate of the groups of registration districts ranged from 17·0 in the Large Town Districts to 15·4 in the Insular-Rural Districts. In the Principal Town

xiv Report.

Districts the death-rate of the year was 16·2, in the Small Town Districts 15·9, and in the Mainland-Rural Districts 15·6. The approximation of the death-rate of the Principal Town Districts to that of the rural districts is a matter to which attention has previously been directed in these reports. In the year now under consideration, 1908, the death-rate of the Principal Town Districts is only 0·1 per thousand above the national death-rate, 0·6 above that of the Mainland-Rural Districts, and 0·8 above that of the Insular-Rural Districts. From 1861 to 1870 the average difference between the death-rate of the Principal Town Districts and that of the Mainland-Rural Districts was 11·1, between 1871 and 1880 it was 9·0; and as the difference found this year is only 0·6 it may be taken as a demonstration of the improved health conditions of the principal towns.

In the divisions of the counties the death-rate ranged from 16·8 in the South-Western to 14·7 in the North-Eastern. In the Northern and North-Western it was 16·2, in the East-Midland and Southern 16·1, in the West-Midland 15·6, and in the South-Eastern 15·4. Compared with the rates of the previous year that of the East-Midland is 0·2 higher, but those of the West-Midland, South-Eastern, and Southern Divisions are 0·4 lower, those of the Northern and North-Western 0·3 lower, that of the North-Eastern

0.1 lower, and that of the South-Western 0.1 more.

Of the total deaths registered in the country during the year, 38,890 were of males, and 38,949 of females, the proportion being 99.8 male deaths to each 100 female deaths. The male deaths are 623 more than in the previous year, the female deaths are 51 fewer than in that year. The male death-rate per thousand of the estimated male population is 16.5, and the female death-rate per thousand of the estimated female population 15.8; the former is 0.1 above the corresponding rate of the previous year, the latter

is 0.2 below the corresponding rate of the previous year.

The death-rate of the first quarter of the year was 20·0, that of the second quarter 16·2, that of the third quarter 13·4, and that of the fourth quarter 14·8. The death-rate of the first quarter was 0·8 more than that of the previous first quarter, and 0·4 more than the mean of the death-rates of the first quarters of the preceding ten years. The death-rate of the second quarter was 0·7 below that of the previous second quarter and 1·2 less than the mean of the death-rate of the third quarter was 0·3 above that of the previous third quarter, but 1·5 less than the mean of the death-rate of the fourth quarter was 0·8 below that of the previous fourth quarter, and 1·8 less than the mean of the death-rates of the previous ten years.

The average daily number of deaths registered in Scotland during the year was 213. This average ranged from 272 in January, to 172 in July. In February the average number of deaths registered daily was 268, in March 252, in April 242, in May 208, in November 207, in December 206, in June 193, in August 182, in September 179, and in October 175. In the previous year the daily average number of deaths registered ranged from 262 in February, to 162 in August.

MARRIAGES.

Marriages registered in Scotland during the year 1908 numbered 31,583, which is 1677 less than the number of marriages registered in 1907, 876 less than the average number registered annually during the previous five years, and 730 less than the number registered annually during the previous ten years. Of these marriages, 16,789, or 53·1 per cent., were registered in the Principal Town Districts; 4165, or 13·2 per cent., in the Large Town Districts; 6023, or 19·1 per cent., in the Small Town Districts; 4258, or 13·5 per cent., in the Mainland-Rural Districts; and 348, or 1·1 per cent., in the Insular-Rural Districts. The marriages in the Principal Town Districts were 1161 fewer in this than in the previous year, those in the Large Town Districts were 220 fewer, those in the Small Town Districts 193 fewer, and those in the Mainland Rural Districts 112 fewer, but those in the Insular-Rural Districts were 9 more.

The marriage-rate of the year was 6.54 per thousand of the estimated population, a rate which is 0.42 less than that of 1907, 0.40 less than the mean of the marriage-rates of the previous five years, and 0.56 less than the mean of the marriage-rates of the previous ten years. It is the lowest national marriage-rate of any year since 1888. The only lower annual rates were those of 1858, 1879, 1886, 1887, and 1888.

The marriage-rate in the groups of registration districts ranged from 7.6 in the Principal Town Districts to 3.1 in the Insular-Rural Districts. In the Large Town Districts it was 6.8, in the Small Town Districts 6.2, and in the Mainland-Rural Districts 4.6. Compared with the marriage-rates of the previous year, that of the Principal Town Districts shows a decrease of 0.6, that of the Large Town Districts a decrease of 0.3, that of the Mainland-Rural Districts a decrease of 0.2, but that of the Insular-Rural Districts an increase of 0.1.

In the Northern Division of the counties the marriages registered during the year numbered 440, and the marriage-rate was 4·1; in the North-Western Division the marriages numbered 671, and the rate was 4·2; in the North-Eastern the number was 2843, and the rate 5·9; in the East-Midland the number was 4·601, and the rate 6·7; in the West-Midland the number was 2042, and the rate 5·3; in the South-Western the number was 14,589, and the rate 6·9; in the South-Eastern the number was 5259, and the rate 7·4; in the Southern Division the marriages numbered 1138, and the marriage-rate was 6·1. Compared with the marriage-rates of the divisions of the counties for 1907, that of the South-Western is 0·7 less, that of the West-Midland is 0·5 less, that of the North-Eastern 0·3 less, that of the North-Eastern 0·3 less, that of the Northern 0·1 less, that of the East-Midland shows no change, while that of the North-Western is 0·1 more.

The marriage-rate of the first quarter was 6.3, and was 0.2 less than the mean of the marriage-rates of the first quarters of the previous ten years; that of the second quarter was 7.3, and was 0.1 less than the mean of the marriage-rates of the previous ten second quarters; that of the third quarter was 6.6, and was 0.6 less than the mean of the

xvi Report.

marriage-rates of the previous ten third quarters; and that of the fourth quarter was 5.9, and was 1.3 less than the mean of the

marriage-rates of the previous ten fourth quarters.

The average number of marriages registered daily in Scotland during the year was 86, which is 5 less than in 1907. This average in June was 168; in January, 124; in July, 121; in December, 104; in April, 90; in September, 75; in November, 67; in March, 65; in August, 65; in October, 61; in February, 60; and in May, 35. The daily average number of marriages registered in July is 25 less than in the previous July, and that in December 24 less than in the previous December.

II.—BIRTHS, DEATHS, AND MARRIAGES IN EIGHT OF THE PRINCIPAL TOWNS OF SCOTLAND.

The following remarks refer to the births, deaths, and marriages registered during the year in eight of the Principal Towns, namely:—Glasgow, Edinburgh, Dundee, Aberdeen, Paisley, Leith, Greenock, and Perth. The information on which the following statements are founded is compiled from returns furnished weekly by the registrars of those towns, and similar information regarding the deaths registered elsewhere in Scotland is not yet available. When that information is available, that is, after the registers have been examined and transmitted to the General Register Office, it will be incorporated in the Fifty-fourth Detailed Annual Report, which will deal with the births, deaths, and marriages of the year now under consideration. As 38 per cent. of the total population of Scotland live in those eight towns, it is reasonable to assume that the causes of death found to have been prevalent in them during the year are a fair indication of the causes of death prevalent generally throughout Scotland during the year.

BIRTHS IN THE EIGHT TOWNS.

Births registered in the eight towns during the year 1908 numbered 48,206; the estimated aggregate population of the towns at the middle of the year was 1,839,038, and thus the annual birth-rate amounts to 26·2 per thousand. These births are 75 more than those registered in the eight towns in 1907, but 1187 fewer than the average annual number registered in them during the previous five years, and 1369 fewer than the average annual number registered during the previous ten years. The birth-rate is the lowest annual birth-rate yet recorded for these towns, the previous lowest being that of 1907, which was 26·6. The birth-rate of the year is 2·0 less than the mean of the birth-rates of the previous five years and 3·1 less than the mean of the birth-rates of the previous ten years.

The birth-rate of the year in these eight towns ranged from 30·3 in Greenock to 21·4 in Edinburgh. In Leith it was 28·3; in Glasgow,

Report.

27.8; in Dundee, 27.4; in Paisley, 26.2; in Aberdeen, 25.0; and in Perth, 22.0. The birth-rate of the year for Leith is 0.7 more than that of 1907; those of Dundee, Paisley, and Greenock are of the same amount; that of Edinburgh is 0.3 less; that of Glasgow 0.5 less; that of Perth 0.6 less; and that of Aberdeen 0.8 less.

Of the 48,206 births registered in these towns during the year, 3459, or 7.2 per cent., were illegitimate. This illegitimate rate is 0.1

xviii Report.

more than that of the previous year, 0.2 more than the mean of the illegitimate rates of the previous five years, and 0.4 more than the mean of the illegitimate rates of the previous ten years. The illegitimate rate of the eight towns ranged from 8.9 in Edinburgh to 4.6 in Leith. In Aberdeen it was 8.7; in Dundee, 8.2; in Perth, 7.6; in Glasgow, 6.9; in Greenock, 4.8; and in Paisley, 4.7. In Glasgow, Edinburgh, Leith, Greenock, and Perth this rate was higher than in the previous year, but in Dundee, Aberdeen, and Paisley it was lower than in that year.

The number of unmarried and widowed women of child-bearing age, 15 to 45, in the eight towns is estimated at 283,562, and as the number of illegitimate children born during the year was 3459, the illegitimate birth-rate per thousand unmarried and widowed women of child-bearing age was 12·2, which rate is 0·1 less than that of 1907. This rate ranged from 14·4 in Aberdeen to 7·8 in Paisley. In Glasgow it was 13·4; in Dundee, 12·9; in Greenock, 11·2; in

Edinburgh, 10.4; in Leith, 10.4; and in Perth, 9.8.

DEATHS IN THE EIGHT TOWNS.

Deaths registered in the eight towns during the year numbered 30,752; they are 880 fewer than were registered in 1907, 209 fewer than the average number registered annually during the previous five years, and 1047 fewer than the average number registered annually during the previous ten years. The annual death-rate of the year is 16·7, a rate which is 0·8 less than that of the previous year, 0·9 less than the mean of the death-rate of the preceding five years, and 2·1 less than the death-rate of the preceding ten years. It is the lowest combined death-rate of the eight towns yet recorded, the previous lowest being those of 1905 and 1906, which were both 17·1. From 1855 to 1875 it ranged between 25·6 and 30·7, from 1876 to

Table VIII.—Births, Deaths, and Marriages registered during 1908, and their Proportion to the Estimated Population, in Eight of the Principal Towns of Scotland; Estimated Number of Unmarried Women and Widows between 15 and 45 years of age; and the Illegitimate Births, and their Proportion to the Total Births, and to the Number of Possible Mothers.

1895 it ranged between 18.9 and 25.2, from 1896 to 1907 it ranged between 17.1 and 21.0. The first year this death-rate fell below 20 per thousand was 1888, when it was 19.9; the first year it fell below 19 was 1894, when it was 18.9; the first year it fell below 18 was in 1905, when it was 17.1; and this is the first year in which it has fallen

below 17 per thousand.

Of the eight towns, Dundee had the highest death-rate, 18.6, and Aberdeen the lowest, 14.0. The death-rate of Glasgow was 17.8, that of Greenock 17.0, that of Perth 16.8, that of Paisley 15.4, that of Leith 15.4, and that of Edinburgh 15.3. The death-rate of each of these towns was lower than that of the previous year. The death-rates of Edinburgh, Aberdeen, Paisley, and Greenock are the lowest annual death-rates recorded for those towns, and that of Glasgow is the same as the 1906 death-rate, which was the lowest recorded for that town.

When these death-rates are corrected for the age and sex constitution of the population, it is found that the highest corrected

Table IX.—Death-rate per 1000 of the Population in each of Eight of the Principal Towns of Scotland during each of the Years 1898-1908.

	Estimated Number of	Deatl	ns under 5 years	of age.
Towns.	Living Children under 5 years in 1908.	Number.	Rate per 1000 Children under five.	Percentage of Total Deaths.
Glasgow	102,977	6,012	58.4	39.4
Edinburgh	34,824	1,387	39.8	25.9
Dundee	18,896	1,048	55·5	33.5
Aberdeen !	: 22,149	840	37.9	33.6
Paisley	: 10,846	489	45.1	35.1
Leith	10,516	439	41.7	33.7
Greenock	8,752	463	52.9	38.0
Perth	3,558	143	40.2	24.2

death-rate is in Glasgow, 19.7, and the lowest in Aberdeen, 13.9. In Dundee the corrected death-rate is 19.6, in Greenock 17.9, in Perth 16.9, in Leith 16.4, in Paisley 16.1, and in Edinburgh 15.9.*

Deaths in the eight towns of children of less than one year old numbered 6385; the births in these towns numbered 48,206, and thus the infantile mortality per thousand births was 132, a rate which is 4 higher than in the previous year, and 2 higher than in 1906. The infantile mortality-rate of the year in the towns ranged from 150 in Dundee to 114 in Paisley. In Glasgow it was 137, in Aberdeen 129, in Leith 127, in Edinburgh 122, in Greenock 119, and in Perth 117. Compared with the corresponding rates of the previous year, that of Greenock is 15 more, that of Glasgow 7 more, that of Perth 7 more, that of Leith 6 more, and that of Aberdeen 5 more, but that of Dundee is the same, that of Edinburgh 5 less, and that of Paisley 7 less.

Deaths of children of less than one year old constituted 20.8 per cent. of the total deaths in these eight towns, a rate which ranged from 23.2 in Leith to 15.4 in Perth. In Aberdeen it was 22.9, in Dundee 22.1, in Glasgow 21.5, in Greenock 21.1, in Paisley 19.5, and

in Edinburgh 17.1.

Deaths of children of less than five years old numbered 10,821; they constituted 35·2 per cent. of the total deaths, and are equal to a death-rate of 50·9 per thousand of the estimated population at those ages. These deaths are 13 fewer than in 1907, and this death-rate is 0·8 lower, but the percentage these deaths form of the total deaths is 0·9 more. This death-rate for the year ranged from 58·4 in Glasgow to 37·9 in Aberdeen. In Dundee it was 55·5, in Greenock 52·9, in Paisley 45·1, in Leith 41·7, in Perth 40·2, and in Edinburgh 39·8.

Deaths from the principal infectious diseases, namely, small-pox, measles, scarlet fever, influenza, hooping-cough, diphtheria, and "fevers," numbered 2923, and the death-rate from these causes amounted to 160 per 100,000. These deaths are 959 fewer than in the previous year, and this death-rate is 55 lower. The deaths from

Report.

these infectious diseases include 6 from small-pox, 2 from typhus fever, 99 from enteric fever, 192 from scarlet fever, 291 from diphtheria, 1091 from measles, 934 from hooping-cough, 92 from influenza, 214 from cerebro-spinal meningitis, and 2 from ill-defined or other fever. The death-rate from these causes ranged from 220 per 100,000 in Glasgow to 75 in Perth. In Paisley it was 153, in Greenock 131, in Leith 129, in Dundee 115, in Aberdeen 102, and in Edinburgh 89. In each of the eight towns this rate was lower in this than in the previous year; in Leith it was 101 lower, in Dundee 84 lower, in Glasgow 59 lower, in Edinburgh 56 lower, in Greenock 55 lower, in Paisley 40 lower, in Perth 34 lower, and in Aberdeen 1 lower.

Deaths from small-pox in these towns during the year numbered 6; they were all in Leith. In 1907 there was only one death from this disease in the eight towns.

Deaths from measles numbered 1091, and the death-rate from that cause was 60 per 100,000. These deaths are 361 more than those registered in 1907, and this death-rate is 20 higher than the

xxii Report.

death-rate from measles of that year. Of the 1091 deaths, 830 were recorded in Glasgow. The death-rate from this cause ranged from 97 in Glasgow, 56 in Greenock, and 49 in Paisley, to 6 in Perth, and 8 in Dundee.

Deaths from scarlet fever numbered 192, and the death-rate from that disease was 11 per 100,000. These deaths are 86 more than in the previous year, and the death-rate is 5 higher than in that year. This death-rate ranged from 21 in Dundee, and 11 in Glasgow and

Paisley, to 1 in Greenock, and 0 in Perth.

Deaths attributed to influenza, and in which no other well-defined cause of death, such as pneumonia, was reported, numbered 92, and the death-rate from that cause was 5 per 100,000. These deaths are 93 fewer than in the previous year, and this death-rate is 5 lower than in that year. This death-rate ranged from 9 in Edinburgh, and 8 in Paisley, to 2 in Leith, and 3 in Greenock and Perth.

Deaths from hooping-cough numbered 934, and are 470 fewer than in the previous year. The death-rate from this cause was 51 per 100,000, a rate which is 27 lower than that of the previous year.

The death-rate from this cause ranged from 66 in Leith, and 63 in Glasgow, to 31 in Paisley, and 33 in Edinburgh. In Dundee this rate was 51, in Perth 49, in Greenock 48, and in Aberdeen 36.

Deaths from diphtheria numbered 291, and are 7 more than in the previous year. The death-rate from that disease was 16 per 100,000, a rate which is the same as that of the previous year. Of these deaths 156 were recorded in Glasgow, 41 in Dundee, and 39 in The death-rate from diphtheria ranged from 43 in Paisley, and 24 in Dundee, to 5 in Edinburgh, and 7 in Leith.

Deaths from "fevers" in the eight towns numbered 317, and are 855 fewer than in the previous year; the death-rate due to them was 17 per 100,000, which is 48 lower than in the previous year. These deaths include those ascribed to typhus fever, enteric fever, relapsing fever, cerebro-spinal meningitis, and ill-defined fever. The deathrate from these causes ranged from 27 in Glasgow, and 20 in Leith, to 2 in Aberdeen, and 6 in Perth.

Deaths from typhus fever numbered 2; one of them was registered

in Glasgow and the other in Dundee.

Deaths from enteric fever numbered 99, and are 47 fewer than in the previous year; of them, 72 were registered in Glasgow. The death-rate from enteric fever was 5, a rate which is 3 lower than in the previous year, and ranged from 8 in Glasgow, 6 in Paisley, Greenock, and Perth, and 5 in Leith, to 1 in Aberdeen, and 2 in

Edinburgh and Dundee.

Deaths from cerebro-spinal meningitis numbered 214; they are 804 fewer than in 1907, but 58 more than in 1906. Of them, 156 were registered in Glasgow; 27 in Edinburgh; 13 in Leith; 6 in Dundee; 5 in Paisley; 5 in Greenock; 2 in Aberdeen; and none in Perth. The death-rate from this disease amounted to 12 per 100,000, a rate which is 44 below that for 1907, but 3 above that for 1906. Of these deaths 26 were registered in January; 33 in February; 27 in March; 28 in April; 17 in May; 9 in June; 18 in July; 19 in August; 14 in September; 8 in October; 5 in November; and 10 in December.

xxiv Report.

this year, as in 1907, these deaths were most numerous in February, March, and April, but in this year the maximum number in any one month, February, was only 33, while in the previous year the maximum monthly number was 179, which was recorded in March. The death-rate per 100,000 from this cause ranged from 18 in Glasgow and 15 in Leith, to 1 in Aberdeen and 0 in Perth. In Edinburgh it was 8, in Greenock 7, in Paisley 6, and in Dundee 4.

Deaths from ill-defined or unspecified fever in these towns during

the year numbered 2, and are 1 fewer than in the previous year.

Deaths attributed to diarrhoas, including those certified as due to diarrhoa, to infective enteritis, to enteritis, and to gastro-enteritis, numbered 1234. They are 326 more than in the previous year, and are equal to a death-rate of 67 per 100,000, which rate is 16 higher than that of the previous year. This death-rate ranged from 112 in Dundee to 34 in Edinburgh, and 37 in Perth. In Glasgow it was 80; in Leith, 72; in Greenock, 65; in Aberdeen, 51; and in Paisley, 43. Of the above 1234 deaths, 169 were certified to be due to epidemic diarrhoa or infective enteritis, 362 to diarrhoa not otherwise defined, 317 to enteritis, and 386 to gastro-enteritis. Of them, 1062 were of children of less than five years old.

Report. xxv

Deaths from tuberculous disease numbered 3882. They are 383 fewer than in the previous year, and are equal to a death-rate of 212 per 100,000, a rate which is 25 below that of the previous year. This death-rate ranged from 255 in Perth, and 252 in Dundee, to 150 in Aberdeen. In Greenock it was 237; in Glasgow, 224; in Paisley, 205; in Leith, 199; and in Edinburgh, 191. Of the above deaths, 2423 were ascribed to phthisis, 608 to tuberculous meningitis, 428 to tabes or tuberculous peritonitis, 239 to general tuberculosis, 10 to scrofula, 1 to lupus, and 173 to tubercle of other organs. Deaths from phthisis were 213 fewer than in the previous year, and the death-rate from that cause was 133 per 100,000, which is 13 lower than the corresponding death-rate of the previous year. The death-rate from phthisis ranged from 183 in Perth to 95 in Aberdeen. In Dundee it was 169; in Glasgow, 138; in Leith, 127; in Paisley, 124; in Edinburgh, 122; in Greenock, 122.

Deaths from malignant disease numbered 1883. They are 65 more than in 1907, and the death-rate from it is 103 per 100,000, a rate which is 2 above that of 1907. This death-rate ranged from 146 in Perth, and 133 in Edinburgh, to 63 in Greenock, and 64 in Paisley. Of the above 1883 deaths, 1030 were ascribed to carcinoma, 109 to

sarcoma, and 744 to other or unspecified forms of cancer,

Deaths from pneumonia numbered 3098, and the death-rate from that disease was 170 per 100,000. These deaths are 119 fewer than those of 1907, and this death-rate is 8 below that of that year. This death-rate ranged from 202 in Glasgow, to 115 in Perth. In Greenock it was 177; in Dundee, 174; in Leith, 149; in Edinburgh,

130; in Aberdeen, 127; and in Paisley, 125.

Deaths from bronchitis numbered 2263 and the death-rate from that cause was 124 per 100,000. These deaths are 23 fewer than those registered in the previous year, and this death-rate is 3 less than in that year. This death-rate ranged from 146 in Greenock, to 89 in Edinburgh. In Paisley it was 144; in Dundee, 143; in Glasgow, 139; in Perth, 103; in Aberdeen, 99; and in Leith, 93.

The death-rate from pneumonia and bronchitis combined amounted to 294 per 100,000, which rate ranged from 341 in Glasgow, and 323 in Greenock, to 218 in Perth, and 219 in Edinburgh. In Dundee it

was 317, in Paisley 269, in Leith 242, and in Aberdeen 226.

Deaths from puerperal septic conditions and from diseases and accidents of pregnancy and childbirth in the eight towns during the year numbered 244; they are 4 fewer than in the previous year. The number of living children born in the eight towns during the year was 48,206, and thus the death-rate from these causes amounted to 51 per 10,000 births, a rate which is 1 less than that of the previous year. Of the 244 deaths, 30 were ascribed to puerperal septicæmia, 1 to puerperal pyæmia, 1 to phlegmasia alba dolens, 52 to puerperal fever, 9 to abortion, 31 to puerperal convulsions, 30 to placenta prævia, and 90 to other accidents of pregnancy and childbirth. The death-rate per 10,000 births from these causes ranged from 57 in Edinburgh to 25 in Leith. In Glasgow it was 55; in Greenock, 55; in Perth, 52; in Paisley, 51; in Aberdeen, 49; and in Dundee, 28.

Deaths from violent causes in these eight towns during the year numbered 1241. They are 13 more than in the previous year, and are equal to a death-rate of 68 per 100,000, which is the same as the xxvi Report.

death-rate from violence for the previous year. Of the 1241 deaths, 1 was by execution, 9 were ascribed to homicide, 86 to suicide, and 1145 to accident. Of the last, 210 were due to burns, 146 to drowning, 132 to suffocation (including 60 from overlaying), 44 from falls, 38 from accidents with horses and vehicles, 61 from poisons and

poisonous vapours, and 514 from other causes.

In each 10,000 specified causes of deaths in these towns during the year there were 1000 from diseases of the heart; 957 from infectious disease; 823 from diseases of the respiratory system, pneumonia excluded; 654 from diseases of the digestive system; 651 from diseases of the blood vessels; 406 from violence; and 401 from diseases of the urinary system. Deaths from tuberculosis amounted to 1270 per 10,000 specified causes of death; deaths from pneumonia to 1014 per 10,000; from bronchitis to 741; from apoplexies to 558; and from old-age to 251.

Among those dying in the eight towns during the year there were 35 males and 92 females aged 90 years and upwards, the oldest of whom were two widows aged 102 and 100 respectively, and a spinster

aged 101.

MARRIAGES IN THE EIGHT TOWNS.

The number of marriages registered in the eight towns during the year was 14,562, a number which is 899 less than that of the previous year, 503 less than the average number of marriages registered annually during the previous five years, and 483 less than the average number of marriages registered annually during the previous ten years. The marriage-rate of the year in these towns is 7.9 per 1000 of the estimated aggregate population, which rate is 0.6 less than that of the previous year, 0.7 less than the mean of the marriage-rates of the previous five years, and 1.0 less than the mean of the marriage-rates of the previous ten years. A marriage-rate of 7.9 for these towns was recorded in 1886 and 1887, but no lower rate for these towns has yet occurred. Since the introduction of national registration, which was in 1855, the marriage-rate of these towns has 19 times been 9 per 1000 or more, 22 times between 8.5 and 8.9, 10 times between 8 and 8.4, and only twice previously less than 8 per 1000.

The marriage-rates of the towns ranged from 8.5 in Edinburgh to 6.4 in Leith. In Glasgow it was 8.2; in Perth, 8.2; in Dundee, 7.6; in Aberdeen, 7.3; in Greenock, 6.9; and in Paisley, 6.8. Compared with the marriage-rates of the previous year that of Greenock is the same; that of Leith is 0.1 less; that of Perth, 0.1 less; that of Edinburgh, 0.4 less; that of Glasgow, 0.6 less; that of Dundee, 0.7 less; that of Aberdeen, 1.1 less; and that of Paisley, 1.3 less.

III.—WEATHER AND ITS INFLUENCE ON MORTALITY.

The remarks regarding the weather of the year made in this section of the report are based on notes made by Mr. Andrew Watt, M.A., secretary of the Scottish Meteorological Society, and published in the Monthly and Quarterly Reports.

In this report there is for the first time included an appendix shewing an abstract of the meteorological observations taken at all the Scottish observation stations during all the months of the year. These abstracts are collected from the quarterly reports, and are here reproduced in a collected form for the purpose of facilitating reference. The meteorological tables in the quarterly reports are arranged to show the climatic conditions during each month at all stations; the tables in this report are arranged to show the climatic conditions during all months at each station.

The year, as a whole, was characterised by a mean temperature which was somewhat higher than normal, and by a comparatively small rainfall. The mean temperature of the country, as based on daily observations at sixty-six observation stations, was $47^{\circ}.0$ Fahrenheit, which is $1^{\circ}.2$ above the mean temperature of the previous year, $0^{\circ}.6$ above the average of the mean temperatures of the previous ten years, and $0^{\circ}.7$ above the average of the mean temperatures of the previous twenty years. The average rainfall, or more strictly the mean of the rainfalls observed at the sixty-six observation stations,

the mean of those of the previous ten years, and 0°.7 above the mean

of those of the previous twenty years.

The mean temperatures of March, April, and August were below normal, that of April being markedly so; those of the remaining months were equal to or above normal, that of February and of October being markedly so. The rainfall in the eight towns was decidedly more than the average in March and September; the rainfall of the other months was equal to or below average, that of October being markedly so.

These climatic conditions, a somewhat high mean temperature and a low rainfall, have occurred in a year with a low national death-

rate and with a low death-rate in the eight principal towns.

The previous year was one with a lower mean temperature and with a larger rainfall. A comparison of the mortality in the eight towns of this year with the mortality in them for last year shows that deaths from influenza, from hooping-cough, from tubercle, from pneumonia, and from bronchitis were fewer, but that those from diarrheas and from measles were more. Deaths of children of less than one year old in the eight towns were 208 more than in the previous year, but those of persons of over sixty were 5 less.

FORTY-FOURTH ANNUAL REPORT

ON THE

VACCINATION OF CHILDREN

BORN IN SCOTLAND IN 1907.

The number of living children whose births were registered in Scotland during the year 1907 was 128,891. Of them, 12,187 died before being vaccinated, 96,842 were registered as successfully vaccinated, and 19,251 were not reported to have been vaccinated and are believed not to have been vaccinated. The total number of children registered in 1907 was 3165 less than the number registered in 1906, but the number of the 1907 children successfully vaccinated was 12,404 less than that of the 1906 children, and the number of the 1907 children believed to be unvaccinated was 9596 more than that of the 1906 children.

The number successfully vaccinated, 98,642, amounts to 75·14 per cent. of the total children, and to 82·98 per cent. of the children alive at the time of vaccination; the former percentage is 7·59 lower

than that of the previous year, and 8.91 lower than the mean of the percentages of the previous ten years; the latter percentage is 8.47 lower than that of the previous year, and 10.31 lower than the mean of the percentages of the previous ten years. Both percentages are the smallest yet recorded.

The number of children dying before vaccination was 12,187; these amounted to 9.46 per cent. of the total children registered. This number is 405 less than the corresponding number of the previous year, and 845 less than the mean of the corresponding

^{*} Including such as were certified as Insusceptible of Vaccination "on the ground of previous successful vaccination," the children having been vaccinated by persons unauthorised to grant certificates, † At the end of the year following that of registration of birth.

Report. xxxiii

of the previous year, and 1016 more than the mean of those numbers for the previous ten years. These children amounted to 3:00 per cent of the total for the year, a percentage which is 0:65 more than that of the previous year, and 0:84 more than the mean of the percentages of the previous ten years. These children amounted to

3.3 per cent. of those surviving at the time for vaccination.

Children unvaccinated by reason of constitutional insusceptibility amounted to 744, which number is 213 more than in the previous year, and 185 more than the mean of the numbers of the previous ten years. These children amount to 1 in every 173 children registered; in the previous year these insusceptibles amounted to 1 in 249. They amount to 0.7 per cent. of children surviving at the time for vaccination. As previously pointed out in these reports, the proportion of children reported to be insusceptible varies largely in different parts of the country. eight principal towns the rate of constitutional insusceptibility varied from 1 in 89 in Dundee to 1 in 409 in Aberdeen. In Edinburgh it was 1 in 127, in Paisley 1 in 166, in Leith 1 in 154, in Greenock 1 in 180, in Glasgow 1 in 232, and in Perth 1 in 263. Among registration districts in which a relatively large number of insusceptibles are reported, there were Tulliallan (1 in 12), Inverallochy (1 in 13), Tillicoultry (1 in 25), Kirknewton (1 in 28), Brechin (1 in 33), Fraserburgh (1 in 41), Galston (1 in 48), and New Cumnock (1 in 54). There were three counties in which no insusceptibles were reported, namely, Caithness, Bute, and Haddington.

The number reported to be insusceptible by reason of previous vaccination was 611. If these be added to the number registered as successfully vaccinated, they would bring the total number of successful vaccinations up to 97,453, which is 12,356 less than in the previous year, and amounts to 83.5 per cent. of the total children, which rate is 8.4 less than that of the previous year, and 10.2 less

than the mean of the rates of the previous ten years.

The number of children reported to have been removed from the district of registration or otherwise unaccounted for was 7384, a number which is 1618 more than the corresponding number for the previous year, and 3359 more than the mean of the corresponding numbers for the previous ten years. These children amount to 5.73 per cent. of the total, which rate is 1.36 more than that of the previous year, and 2.67 more than the mean of the rates of the previous ten

Table XXII.—Smallpox Deaths in Eight of the Principal Towns of Scotland at different Ages in 1908, also during the Ten Years 1895-1904, 1885-1894, 1875-1884, and 1865-1874, compared with those in the same towns for the Ten Years before the Vaccination Act came into operation, viz., 1855-1864.

years, and to 6.3 per cent. of children surviving at the time for vaccination. The proportion of surviving children unaccounted for is decidedly larger than that of any previous year. From 1864 to 1897 it was always less than 3 per cent., from 1898 to 1905 it was between 3 and 3.4 per cent., in 1906 it was 4.8 per cent., and this

year it is 6.3 per cent.

The number of children whose births were registered in 1907 and who were not vaccinated by reason of the conscientious objection of their parents was 7258, in the previous year they numbered 253, but in that year the Vaccination (Scotland) Act, 1907, was not fully effective during the whole twelve months. These children amount to 5.63 per cent. of the total children, and to 6.22 per cent. of the children alive at the time for vaccination. These children amount to 1 in every 17.8 of the total. This rate varied widely. In the counties it ranged from 1 in 5.5 in Shetland, 1 in 9.9 in Renfrew, 1 in 10.8 in Stirling, 1 in 11.9 in Selkirk, and 1 in 12.5 in Ayr; to 1 in 186.2 in Wigtown, 1 in 120.6 in Berwickshire, 1 in 97.9 in Ross and Cromarty, 1 in 96.8 in Haddington, and 1 in 61.3 in Aberdeen. In the eight principal towns this rate ranged from 1 in 7.3 in Paisley, to 1 in 64·1 in Leith. In Greenock it was 1 in 10·5; in Dundee, 1 in 11.6; in Glasgow, 1 in 20.4; in Perth, 1 in 46.4; in Edinburgh, 1 in 51.4; and in Aberdeen, 1 in 55.6. Among registration districts in which this rate was conspicuously high, there were Forth (1 in 2.5), Slamannan (1 in 2.8), Armadale (1 in 3.4), Lerwick (1 in 3.6), Kilmarnock (1 in 46), Bellshill (1 in 46), Haggs (1 in 46), Whitburn (1 in 47), Irvine (1 in 51), Larkhall (1 in 51), and Dreghorn (1 in 5.2).

It will be seen from the above figures that the amount of non-vaccination due to the conscientious objection of parents has been very considerable, and that as a direct result of the provisions of the 1907 Act a very considerable number of unvaccinated children have been added to the population. I would draw attention to the fact that while that Act has directly added to the number of the unvaccinated, it also appears to have done so indirectly, for since that Act has been in force the number of children unaccounted for and the number of children reported to be insusceptible have both been increased. The increase of the former amounts to 83 per cent. of the average annual number unaccounted for during the previous ten years, the increase of the latter to 33 per cent. of the average annual number reported to be

insusceptible during the previous ten years.

Of the children born in 1907 and surviving to the age for vaccination, 83.5 per cent. are reported to have been successfully vaccinated. Previous to 1907 that proportion was never less than 93.4, and has been as high as 96.9.

I have the honour to be,

SIR,

Your most obedient Servant,

JAMES C. DUNLOP.

18th February, 1909.

Yes.

I,-BIRTHS

REGISTERED IN SCOTLAND DURING EACH MONTH OF THE YEAR 1908.

APPENDIX.

VACCINATIONS, 1907.

In compliance with the following Instruction, some of the Registrars have appended remarks to their Annual Vaccination Return, and from these remarks the subjoined are selected. The Registrars alone must be considered responsible for the opinions which they express.

INSTRUCTION TO REGISTRARS.

"The Registrar will briefly state any special circumstances that may have occurred in his District in connection with the operation of the Vaccination Acts, also the reason, if an abnormal number be entered in any of the columns."

I.-NORTHERN DIVISION.

1. SHETLAND.

3 (3). FAIR ISLE.—Of the four children whose births were registered in 1907, two at least have been vaccinated, but no certificate can be granted until the doctor's next visit.

II, NORTH-WESTERN DIVISION.

5. Ross and Cromarty.

Mainland.

- 60 (1). CONTIN.—Whooping Cough was prevalent in the summer, and vaccinations had to be postponed.
- 66 (2). SOUTH GAIRLOCH.—The recent death of the local medical practitioner may cause some delay in vaccination.

Insular.

- 88. Stornoway.—During the past twelve months there has been a wide-spread epidemic of Measles in the Parish, and this accounts for the large number entered in col. 8.*
- 89. UIG.—The large number entered in col. 8* is accounted for by the fact that the vaccinator was unable to perform the vaccinations in Bernera district owing to the prevalence of illness.

6. Inverness.

Mainland.

103. KIRKHILL.—A good deal of misunder-standing of the 1907 Act has arisen, as to the time limit, and several declarations have come in for children over a year old.

Insular.

111 (1). NORTH HARRIS.—Vaccination behind on account of the Parish being for some time without a vaccinator, but one has lately been appointed, and will, it is hoped, soon overtake the work.

- 117 (2). SOUTH SNIZORT.—The prevalence of Measles accounts for the number not yet vaccinated.
- 118 (1). Benbecula,—Four of the cases unaccounted for were due to the prevalence of Whooping Cough, but the doctor expects to vaccinate them as soon as possible.

III. NORTH-EASTERN DIVISION.

10. ABERDEEN.

- 168 (1). St. Nicholas.—Of the cases entered in col. 8*, 129 were reported to the Parish Council in September.
- 168 (2). St. Machar.—Col. 8* includes 34 cases reported by the Inspector of Poor as "Not found"; 61 cases on which he has made no report; and 35 cases where the Postponement Certificate had expired before 31st December, 1908, but where it will probably be renewed.
- 169. ABERDOUR.—The one case entered in col. 8* was that of the child of a vagrant, who could not be traced.
- 231 (1). EAST PETERCULTER (Landward),— Some of the cases entered as "Postponed" are postponements caused by epidemics of Scarlet Fever and of Diphtheria presently prevailing in the district.

IV. EAST-MIDLAND DIVISION.

12. Forfar.

- 282 (4). Dunder, St. Andrew.—In addition to the cases of Conscientious Objection accepted, there have been received 32 Declarations which were invalid owing to their having been signed after the prescribed period allowed by the Act had expired.
- 282 (5). DUNDEE, LOCHEE.—The fact that a large number of the population here are of a migratory class may partially account for the very small number returned as "Successfully Vaccinated." A special effort will be made to increase that number.

^{*&}quot;Removed from District before Vaccination, or otherwise Unaccounted for."

13. PERTH.

341 a. COMRIE.—In the two cases "Unaccounted for," the children are said to have been vaccinated, though the certificate has not yet been issued.

14. Fife.

454. St. Monance.—In two of the cases entered in col. 8*, the children are said to have been vaccinated.

V. WEST-MIDLAND DIVISION.

19. ARGYLL.

Mainland.

508. CRAIGNISH.—In the case entered in col. 8*, an irregular Declaration of Conscientious

Objection was sent in. The child has since then been vaccinated, but the certificate has not yet been returned.

VII. SOUTH-EASTERN DIVISION.

25. Edinburgh.

674. BORTHWICK.—In the case noted as "Unaccounted for," the child has been vecinated, but the medical certificate is not yet to hand.

685 (3). EDINBURGH, CANONGATE. — The Declaration of Conscientious Objection is being taken advantage of in an increasing degree as the knowledge of it becomes more widely diffused.

^{*&}quot;Removed from District before Vaccination, or otherwise Unaccounted for."

Applecross, 58	Banff, 147		536			Craignish. 508
Applegarth, 813	Bannockburn, 488		149	Carnoch (Ross),		Crail, . 417
Arbirlot, 271	Bargrennan, 857			Carnock (Fife),		
	Barony 600		109		632	
Arbroath, 272 Arbuthnott, 250	Barony, . 622		183	Carriden, .	663	
	Barr, 580 Barra(Inverness)108		275		675	
			1	Carsphairn,	860	Cranston, 680
	Barrhead and	Bridge-of-Weir	, 559	Carstairs, .	633	Crathie, . 183
Ardclach, 120	Levern, 572	Bridgeton, .	644	Castleton, .	784	Crawford, . 635

^{*} The actual number of Districts is 1078—many Parishes and Burghs having been divided into two or more Districts for the purpose of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 7 and 18 Districts respectively. In forming the alphabetical arrangement the principle adopted has been to place *compound* names in the order in which they are pronounced.
